

## Senior Project Manager

### Primary responsibilities

Full responsibility for project execution involving deployment of field hardware equipment and IT system for utilities. Project execution involves schedule, scope, budget, contract and personnel management. Must be able to develop and write project scopes. Create and establish procedures for managing project. Monitor work progress, identifying risks, and creating strategies to mitigate them. Involvement with ongoing contract management. Must have excellent leadership, time management and presentation skills as this position will interact with the customer management as well as business partners needed to execute project. Person must be able to mold expectations of client in a positive manner.

Will supervise other project resources and give direction. It is highly desirable to have SAP or other project management tool experience to handle scheduling and planning activities.

Will be required to be on site through duration of project. Significant travel required. Must be able to understand and map client business requirements and establish customers' satisfaction criteria for project success.

### Qualifications

Experienced project manager with over 10 years experience in managing large/complex projects and their integrated schedule, scopes, and budgets. Advanced Metering Infrastructure (AMI) system implementation (electric/gas/water) desired.

### Education

Bachelor of Science degree in engineering discipline is required.

### To apply for this position
